ABOUT ME

I am a Software engineer with a zeal for learning and a promising skill set in an assortment of technologies. I have my graduation in Computer Science and Engineering and my experience of a year with Revature includes Java, C, CPP, MySQL, Web Development, Angular Framework, and Data Structure. I can now manage independently as well as collaborate with the team on projects. I aspire to gain more technical knowledge and experience in big data technologies that will help me to keep enhancing my skills and grow in my professional journey.

One of the main qualities that makes me unique and different from other candidates is my ability to come up with hardworking, problem-solving skills and time management skills. I would love the opportunity to bring my creative ideas and use my skills to this role.

Bachelor's Degree - Computer Engineering

Dr J J Magdum College of Engineering - May 2022

Java

Projects

SocialMedia App

Create a command-line Social Media application. In this project, you have to implement these features: create a profile, update a profile, delete a profile, view a profile, search profile, create a post, show a timeline, see posts created by another user, and sign in and sign out.

Roles / Responsibilities

- Connected with a database and added two tables for the user and user posts.
- Designed a register and login API for users.
- Used JDBC for making communication between database and client side.
- Stored the data of the user so that they need not to enter every time.
- Used Email as the primary key so that user can easily access their account.
- Maintained log files using log4j.

Environment / Technologies

Java, JDBC, MySQL, JUnit, Maven

FoodSwipe

FoodSwipe connects hotels and customers. Here, various hotels and users can register. Users can search hotels, see details, choose hotels, order food online, or by going to that hotel. And hotels can manage their orders, serve food, and get payment from customers.

Roles / Responsibilities

- Worked on Spring Tool Suite for development.
- Built Attractive and Responsive single-page web application using Angular.
- Incorporated Object-Oriented Programming Concepts such as Encapsulation, Inheritance, and Abstraction.
- Used Design Patterns such as MVC.
- Utilized hibernate to perform database-related operations.
- Used Rest API to establish a connection between the front end and back end.
- Deployed AWS S3 bucket and AWS EC2 to have a fully functioning remote application.
- Used Monolithic Service for implementing the code.

Environment / Technologies

Angular 10, Spring Data, Spring Boot, MySQL
